Description

The Adeno-X Promoterless Vector Set (with ZsGreen1) is supplied with the Adeno-X Adenoviral System 3 (Universal, Green) [Cat. No. 632264], which lets you place an expression cassette of your choice in an adenoviral vector format. The system provides a perfect platform for the tissue-specific expression of your gene of interest, or for the efficient delivery of shRNA or microRNA. pAdenoX-PRLS-ZsGreen1 is a prelinearized, adenoviral vector that is ready for the insertion of an expression cassette via In-Fusion® HD PCR cloning technology. Simply PCR-amplify the expression cassette and combine it with pAdenoX-PRLS-ZsGreen1 in an In-Fusion HD Cloning reaction. In-Fusion HD Cloning is fast, simple, precise, and efficient, making Adeno-X Adenoviral System 3 the most advanced, commercially available, adenoviral gene delivery tool. In addition, independent, constitutive expression of the fluorescent protein ZsGreen1 from the E3 region of the adenovirus genome allows fluorescence visualization of infected cells during rescue, amplification, and target cell infection.

Functional Testing

The Adeno-X Adenoviral System 3 (Universal, green) was tested using the control fragment (*lacZ*) according to the protocol described in the Adeno-X Adenoviral System 3 User Manual (PT5177-1). Chemically competent Stellar *E. coli* cells were transformed with 1.5 μ l of the In-Fusion reaction mixture. After 60 min at 37°C in SOC medium, the cells were plated on agar containing 100 μ g/ml ampicillin. Transformants were grown at 37°C for 24–30 hrs. PCR colony screening with the Adeno-X Screening Primer Mix revealed that >50% of the resultant colonies contained recombinant adenoviral DNA.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
