Description

The pLVX-Puro Vector is a lentiviral expression vector that can be used to generate high titers of lentivirus for transducing mammalian cells. Transduced target cells will express a user-generated gene of interest from the vector's internal CMV promoter. Using the Lenti-X™ HTX Packaging System (Cat. No. 631247) to transfect pLVX-Puro into 293T packaging cells will produce very high titers of replication-incompetent, VSV-G pseudotyped lentivirus, which can then be used to transduce virtually any mammalian cell type.
